Agenda X

Advanced Calendaring for Outlook

Agenda/X leverages Microsoft Exchange calendaring by publishing a consolidated, graphical summary of Outlook Calendar information via your corporate intranet.

Ideal for large or mobile organisations, Agenda/X gives managers, group secretaries and co-workers an instant, web-based view of where people are, what they are doing, and when they are next available.
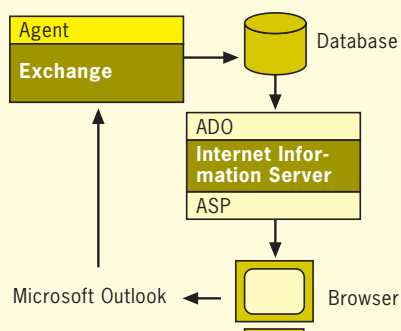

■ Saves time and improves efficiency and customer service.

■ Offers a rich set of views, including an instant 'who is where' snapshot, as well as daily, weekly and monthly views for individuals or groups of users.

■ User-defined group views ease Exchange calendar admini-stration.

■ Consolidates views across Exchange servers, locations and time zones, with support for 4 languages (English, French, Italian and German).

■ Allows meetings to be reques-ted via the web (no Outlook installation necessary).

■ Keeps private calendar entries private!

■ Customisable web interface and optional integration with Oracle or any ODBC comp-liant database (e.g. Microsoft Access, SQL Server) offers a range of alternative appli-cations.

Agenda X

The web-based calendaring solution for Microsoft Exchange

How Agenda/X works

Easy to set up and always up to date, a server-based calendar agent regularly copies all Outlook appointments into a central database. Microsoft Internet Information Server publishes this information as a set of tabular overviews on the company intranet or Internet site accessed by any type of browser. Agenda/X is an open solution based on Microsoft Active Server Pages, offering much flexibility. The central database can be SQL Server, Microsoft Access or any other ODBC compliant system. And, although the default calendar web pages will suit most sites, Agenda/X web pages can be enhanced and re-designed in any appropriate fashion.

Highly Customisable

Agenda/X views are easily tailored to reflect corporate identity and business needs. The 'out-of-the-box' icons and colours used to represent different activities can be changed as desired.
Additional Outlook appointment fields can be added to the Agenda/X database, either by adding standard Outlook fields or by customising the Outlook appointment form and then adding them to Agenda/X.
Default 'corporate','departmental' and other meaningful views can be defined centrally and published via the corporate Intranet. Individual users can also create and maintain their own personal groups to reflect current project members or other key co-workers.

Secure

Agenda/X views are subject to 3 different security levels:

- **None** (everybody sees all calendars)
- **Minimal** (details such as subject and location are not published for certain users)
- **Full** (allows access according to Outlook access controls)

Note that appointment details of private entries are never published.
If web-based appointment bookings and personal group definitions have been enabled, all bookings via the web can be made subject to the 'NT Challenge-response' protocol.

Specifications

Server
- Microsoft Windows NT Server 4.0, SP5 or Windows Server 2000
- Microsoft Exchange Server 2000, Version 5.5, SP3 or later
- Microsoft Internet Information Server 4.0 or later
- CDO V1.21 or higher
- Microsoft Access, SQL Server, Oracle (ODBC compliant database)

Client
- Microsoft Windows Operating System with Internet Explorer 4.x or higher
- Microsoft Outlook V8.03 or later

Trial Version

**A 30 day trial version is available for download from the Internet:
